Development and structure of the B-cell Receptor. The first checkpoint in the development of a B-cell is the production of a functional pre-BCR, which is composed of two surrogate light chains and two immunoglobulin heavy chains, which are normally linked to Ig- γ and Ig- δ signaling molecules. Each B-cell, produced in the bone marrow, is highly specific to an antigen.

The new sixth edition of HERO is out, it's 2/3rds bigger than the previous version and is split across two volumes. The two most infamous boardgame "rulebooks suitable for scaring people" (or beating them upside the head) would probably be Advanced Squad Leader and Star Fleet Battles. Both are capable of filling a large 3-ring binder to bursting.

História e terminologia. Em biologia, os órgãos são definidos como unidades funcionais confinadas dentro de um organismo. [3]Creditado como o primeiro [4] [5] [6] a usar um diminutivo de órgão (isto é, "pequeno órgão") para estruturas celulares foi o zoólogo alemão Karl August Möbius, que usou o termo organula (plural de organulum, o diminutivo de organum em latim).

A stroke—also called a cerebrovascular accident (CVA) or a brain attack—is a reduction or an interruption of the flow of blood through an artery to one or more areas of the brain within the territory supplied by that artery. The end result is varying degrees of neurological and/or cognitive malfunction lasting longer than 24 hours. A very severe stroke can cause sudden death.
