Ketamine, sold under the brand name Ketalar among others, is a medication mainly used for starting and maintaining anesthesia. It induces a trance-like state while providing pain relief, sedation, and memory loss. Other uses include for chronic pain and for sedation in intensive care. Heart function, breathing, and airway reflexes generally remain functional during its effects.

A urinary tract infection (UTI) is an infection caused by bacteria in part of the urinary tract. In the lower urinary tract, it is known as a simple cystitis (a bladder infection). In the upper urinary tract, it is known as pyelonephritis (a kidney infection). Symptoms from a lower urinary tract infection include painful peeing and either frequent peeing or wanting to pee (or both).

WHO Regional Office for Europe, Copenhagen, Denmark, 2000 1 Chapter 5.2 Benzene General description Benzene (C₆H₆) is a colourless liquid at room temperature (melting point 5.5 °C) with a density of 0.87 g/cm³ at 20 °C. It has a relatively low boiling point (80.1 °C) and a high vapour pressure (9.95 kPa at 20 °C), causing it to evaporate rapidly at room temperature.

Chapter 5.2 Benzene - World Health Organization

Introduction. Diseases of the kidney are a common finding in people with diabetes, with up to one-half demonstrating signs of renal damage in their lifetime. Diabetes is the leading cause of kidney disease in Canada. Kidney disease can be a devastating complication, as it is associated with significant reductions in both length and quality of life. A variety of forms of chronic kidney disease ...
