i The methodology for calculating the renewable share of total final energy consumption has been modified from earlier versions of the Renewables Global Status Report (GSR). Based on the previous methodology, the estimated share for 2015 is about 19.6%. For details, See endnote 12 for this chapter. ii

CHAPTER 3: CALCULATION OF THE ENERGY CONTENT OF FOODS - ENERGY CONVERSION FACTORS. As stated in Chapter 1, the translation of human energy requirements into recommended intakes of food and the assessment of how well the available food supplies or diets of populations (or even of individuals) satisfy these requirements require knowledge of the amounts of available energy in individual foods.
