Chapter 5 Diffusion - University of Tennessee

CHAPTER 5 SOLID STATE DIFFUSION INTRODUCTION Numerous chemical reactions or micro-structural changes in solids take place through solid state diffusion, i.e. the movement and transport of atoms in solid phases. The diffusion takes place because of the presence of defects in solids. Point defects, e.g. vacancies and interstitial

CHAPTER 5 SOLID STATE DIFFUSION

In this chapter we concentrate on the perceived attributes of innovations in explaining an innovation's rate of adoption. Our theme is that subjective evaluations of an innovation, derived from individuals' personal experiences and perceptions and conveyed by interpersonal networks, drives the diffusion process.

Notice warning concerning copyright restrictions

Diffusion of Innovations seeks to explain how innovations are taken up in a population. An innovation is an idea, behaviour, or object that is perceived as new by its audience. Diffusion of Innovations offers three valuable insights into the process of social change: - What qualities make an innovation spread successfully.
