An antibody (Ab), also known as an immunoglobulin (Ig), is a large, Y-shaped protein produced mainly by plasma cells that is used by the immune system to neutralize pathogens such as pathogenic bacteria and viruses. The antibody recognizes a unique molecule of the pathogen, called an antigen, via the Fab's variable region. Each tip of the "Y" of an antibody contains a paratope (analogous to a ...

For decades, the systemic treatment of lung cancer was platinum based chemotherapy, which yielded dismal results regardless of histology. Thus the pathologic diagnosis of NSCLC and SCLC was sufficient to guide treatment recommendations. However, since the 2015 WHO histologic classification of lung cancer was introduced into clinical practice, immunohistochemistry (IHC) has become important in ...

Introduction. The vast heterogeneity within cell types of the tumor microenvironment (TME) crucially impact treatment responses (Junttila and de Sauvage, 2013, Klemm and Joyce, 2015, Palucka and Coussens, 2016).The recent promise of therapies manipulating tumor-infiltrating immune cells has created a particular exigency for human cancer models that recapitulate this TME diversity.
