Enrichment culture is the use of certain growth media to favor the growth of a particular microorganism over others, enriching a sample for the microorganism of interest. This is generally done by introducing nutrients or environmental conditions that only allow the growth of an organism of interest.

HOW TO WRITE AN UNKNOWN LAB REPORT IN MICROBIOLOGY

A neutrophile is a neutrophilic organism that thrives in a neutral pH environment between 6.5 and 7.5.. Environment. The pH of the environment can support growth or hinder neutrophilic organisms. When the pH is within the microbe's range, they grow and within that range there is an optimal growth pH. Neutrophiles are adapted to live in an environment where the hydrogen ion concentration is at ...
