Owing to its wide (3.4 eV) and direct-tunable band gap, gallium nitride (GaN) is an excellent material platform for UV photodetectors. GaN is also stable in radiation-rich and high-temperature environments, which makes photodetectors fabricated using this material useful for in-situ flame detection and combustion monitoring.

In physics, motion is the change in position of an object with respect to its surroundings in a given interval of time . Motion is mathematically described in terms of displacement, distance, velocity, acceleration, time, and speed.Motion of a body is observed by attaching a frame of reference to an observer and measuring the change in position of the body relative to that frame.
