Relational algebra, first created by Edgar F. Codd while at IBM, is a family of algebras with a well-founded semantics used for modelling the data stored in relational databases, and defining queries on it.. The main application of relational algebra is providing a theoretical foundation for relational databases, particularly query languages for such databases, chief among which is SQL

In mathematics, a Borel set is any set in a topological space that can be formed from open sets (or, equivalently, from closed sets) through the operations of countable union, countable intersection, and relative complement.Borel sets are named after Émile Borel.. For a topological space X, the collection of all Borel sets on X forms a ?-algebra, known as the Borel algebra or Borel ?-algebra.

Geschichte Wortgeschichte. Die erste Darstellung der algebraischen Methode findet sich in der Arithmetica, einem Lehr- und Aufgabenbuch des Diophant von Alexandrien, deren Entstehungszeit auf das 1.Jahrhundert v. Chr., nach anderen Quellen auf das 4.

Algebra – Wikipedia

The quaternions are members of a noncommutative division algebra first invented by William Rowan Hamilton. The idea for quaternions occurred to him while he was walking along the Royal Canal on his way to a meeting of the Irish Academy, and Hamilton was so pleased with his discovery that he scratched the fundamental formula of quaternion algebra, $i^2=j^2=k^2=ijk=-1$, (1) into the stone of the ...

Quaternion -- from Wolfram MathWorld

In matematica, e più precisamente in algebra lineare, la base di uno spazio vettoriale è un insieme di vettori linearmente indipendenti che generano lo spazio. In modo equivalente, ogni elemento dello spazio vettoriale può essere scritto in modo unico come combinazione lineare dei vettori appartenenti alla base.. Se la base di uno spazio vettoriale è composta da un numero finito di ...
