

VANDER RENAL PHYSIOLOGY 7TH EDITION BOOK

vander renal physiology 7th pdf

In the physiology of the kidney, tubuloglomerular feedback (TGF) is a feedback system inside the kidneys. Within each nephron, information from the renal tubules (a downstream area of the tubular fluid) is signaled to the glomerulus (an upstream area). Tubuloglomerular feedback is one of several mechanisms the kidney uses to regulate glomerular filtration rate (GFR).

Structure. The loop of Henle can be divided into four parts: Thin descending limb of loop of Henle; The thin descending limb has low permeability to ions and urea, while being highly permeable to water. The loop has a sharp bend in the renal medulla going from descending to ascending thin limb.. Thin ascending limb of loop of Henle

Il metabolismo dell'organismo umano deve quindi mantenere costantemente in equilibrio il pH, attraverso alcuni principali meccanismi tampone: Nei liquidi corporei sono presenti sostanze che fungono da tampone, e che hanno comportamento anfotero, tamponando aggiunte di acidi e anche di basi. Questo sistema è il meno efficace a disposizione del corpo, ma in assoluto il più rapido.
