In chemistry, an ionic compound is a chemical compound composed of ions held together by electrostatic forces termed ionic bonding. The compound is neutral overall, but consists of positively charged ions called cations and negatively charged ions called anions. These can be simple ions such as the sodium (Na^+) and chloride (Cl^-) in sodium chloride, or polyatomic species such as the ammonium ...

Alkuaineita yritettiin 1800-luvulla järjestää atomipainon mukaan monella eri tavalla. Johann Wolfgang Döbereiner mainitsi vuonna 1826 julkaisemassaan atomipainojen taulukossa, että useissa tapauksissa toisiaan eniten muistuttavat alkuaineet muodostivat kolmen alkuaineen ryhmiä, triadeja, joissa yhden alkuaineen atomipaino oli lähellä kahden muun atomipainojen keskiarvoa.

Maailmankaikkeudessa. Vety on maailmankaikkeuden yleisin alkuaine ja sitä on noin 74 % maailmankaikkeudessa esiintyvän aineen massasta. Maailmankaikkeuden atomeista 90 % on vetyä, 9 % heliumia ja 1 % muita aineita. Spektroskooppisilla laitteilla tehdyillä mittauksilla on saatu selville, että Auringosta ja muista tähdistä suurin osa on vetyä.

Jakob Hermann w 1716 roku w dziele Phoronomia opisał gaz jako składający się z cząsteczek poruszających się z różnymi prędkościami. Powiazał on ciepło gazu z kwadratem średniej prędkości jego cząsteczek. Daniel Bernoulli w 1738 roku opublikował Hydrodynamica, w której m.in. wyłożył podstawy kinetyczno-molekularnej teorii gazów. ...
